

CHILDREN ARE BORN WITH WINGS, TEACHERS HELP THEM TO FLY

*Yakusheva S.G.
Tarkhanka Secondary school
Village Tarkhanka, Kazakhstan*

By the middle of the 3rd Millennium the little girls and boys of today will be near the prime of life, the very time to hand over the destiny of our country to them. What problems will they have to solve? It is impossible to foresee them in detail but it is already clear that they will be no less complex than those which fell to the lot of their fathers and mothers. There can be only one conclusion: they must start preparing for the future today.

Out of all the tasks facing our society, the most responsible is the formation of the new man. It is the most noble and, perhaps, the most difficult one. In the long run, factories, dams, machine-tools are everywhere the same, but people are different. And the highest aim of our developed country has always been the development of the individual and the enhancement of the intellectual powers of our people. And the most important thing is that favorable conditions have been created in our country for the development of talent. But what is talent? To my mind it is well-developed natural ability. Therefore we say that it is necessary to develop talent, give it education and, consequently, create it. Some people argue that a musician, an actor, or a scientist must have talent, but anyone can be a worker or a farmer. Is that so? It is indeed easy to become a bad worker. To become good and outstanding in one's trade requires interest, ability, and careful training. And in this very area we, teachers can help our student to find themselves, because we understand that there are no specialties that do not require ability, a lively mind and real devotion. All people are gifted in one way or another. But a natural gift must be discovered and developed so that there will be no mistake in deciding upon an occupation. We know that nearly all girls in the 4-5th grades dream of becoming actresses and the boys want to be cosmonauts. This is very fine, indeed; but is it real? There is an old saying: "If everyone makes a career, who will work?"

I'm sure that a lot of things depend upon the man, what and how he will learn, what he will be like and what he will do when they grow up. We, teachers, trust the youth and expect the most radiant hopes from them. Children are born with wings; teachers help them to fly....So, the main aim of our school today is to help to form the rising generation into interactive, knowledgeable people, who like and know how to work and are always prepared to help other people.

Our school follows the principle: the best and the newest for the young people. Our opinion is that this strategy is the only correct strategy, because the future is in the hands of the youth. Every person should get satisfaction from his work, everyone should be able to work creatively and according to his abilities.

I've been working for about 20 years at a rural school and have many graduates. Among my former students there are doctors, teachers, and engineers. But, in general,

half of the rural school graduates want to work in agriculture and, in particular, in the native village, where they were born. I think that they have to start preparing for future today and teachers must help them. The village needs more highly educated people. So, my dream is to make an agricultural optional course in our school.

I love children and I want to be loved by them. I want to be their friends and set an example in everything, so I try to help them in all their activities!

Some years ago I organized the English club. The regular English lessons teach students much but in our optional group they can do more. We don't retell texts and ask questions each other about something. We always discuss something new! We have a real interesting life in the English club! My students are always in the centre of school life! Each minute of their life is spent on useful activities. They sing popular songs, dance, play different interesting games, take part in producing programs for the school parties, youth festivals, mass meetings, concerts, shows, etc. All these activities make them interesting persons. Our English club is for everybody who has a great interest in learning English and would like to join it. I want my pupils will look back on their school-days with pleasure. I cannot express how happy I'm, because I've motivated students to learn English with great interest! I'm glad to make their intellectual and cultural horizons wider through their contacts in our Club!

Besides, there is the Theatre "Originaly" in our school. It is the world of fairy tales and fantasy, heroes and dragons, naughty little boys and clever puppies, faithful friends and amusing adventures, lazy children and... All sorts of unusual things happen in our Theatre. Our plays are all about quite common simple things: honesty, friendship, love, the beauty of nature, the power of kindness and courage. I'm not looking for talented boys and girls. I'm sure that every child is very talented. I help them to develop their natural abilities and I'd like my job gives equal pleasure to myself and to my students. All people are gifted in one way or another. But a natural gift has to be discovered and developed. A real man is a thinking man, firm, active and creative. I think that the most modern qualities of person in all ages are diligence, honesty, erudition. And today all young people ought to have these traits. Every person has to be sure of himself, has cultural level, the principled position, ability to com-municate.

Our lessons, Club and Theatre help my students to know their strong points better, find activities which suit them, fight their defects and be more active in what they are less successful now.

It banality to say, that children are our future. But it is a fact that those who are born today will decide the destiny of our country, our society, and, perhaps, the rest of the world, in the 21st century. Now, in the third Millennium, they will meet demands which we can't even imagine. I'd like to see my students as harmoniously – developed people, people who will be able to do any work if it is necessary for society, but at the same time people, who like books, understand classical music, have hobbies: collecting, painting, pictures, writing poems, going in for sport, etc... And I hope that English will serve the students throughout their life and that they will continue to study it.

The 21st century has been named in various ways. It has been described as dynamic and fast-moving and it is also called the age of high speeds. And what does

it mean – to see tomorrow from today?... I'm sure that a picture of the future is being put together today because the generation that will live in the 21st century is being brought up today. May this generation be steadfast and noble-hearted, daring and kind. May this generation be happy, and they will be happy if they are courageous and kind. May their actions never run counter to their convictions, nor their words to their deeds. May they know definitely that the path they follow will be the right path. May they have a great love for their Motherland!

PECULIARITIES OF USAGE INNOVATIVE EDUCATIONAL TECHNOLOGIES AT THE MEDICAL UNIVERSITY

Karaganda State Medical University, Kazakhstan

In recent years, the problems of the quality medical education is paid great attention by the system of higher education of Kazakhstan. The main goal of higher medical education is training of specialists with high professional expertise, ensuring proper quality of medical care [2].

New and innovative technologies have been introduced into the educational process for the professional training of the students and interns medical University. These were: interactive lectures (problem, discussion), business games, role playing, teaching in small groups, "round tables", work on clinical scenarios involving standardized patient, presentation using multimedia technology and others. Interactive problem-oriented optional lectures are delivered in open form on rare diseases and complications. Materials of lectures were easily accessible to students and interns outside studying hours and can be used for distance learning.

One of active forms of training is the method of "Business game". It is the most realistic clinical situation, imitation of the relationship between patient and doctor, between doctors of different specialties, compliance deontology, medical ethics, the ability of discussion, opposing, critical self-evaluation. Clinical training games immerse interns in the atmosphere of activities, close to the practical work of the doctor in the recognition of diseases with atypical course or various complications that require innovative approaches to treatment. In addition, the "Business game" are the integral method of control professional training of interns, objectively evaluating its ability real-specific activities. If the student and Intern professionally works in clinical game, it will be up to the mark and in complex clinical situations.

Special attention in the educational process is given to self-education, self-realization of each student as an important aspect in the development of the individual doctor. Self-training is the most effective approach in medical education. Its main element is the initiative of the student. When learning the most important are such methods as the study of periodic literature, monographs of domestic and foreign
